

Q1. Which part in the epidemiology cycle John Snow he controlled in preventing cholera in London in 1928 ?

<c+> He prevented the mode of transmission.

Q2. If a patient recently recovered completely from fever illness, and he still carry the microorganism in his gallbladder. What do we call this condition ?

<c+> Active carrier.

Q3. All of the following methods bacteria use to acquire new genetic information from an external source, EXCEPT :

<c+> Silent mutation

Q4. Which of the following statements is not true ?

<c+> Conjugation involves transfer of genetic information from an F plasmid to the chromosome.

Q5. If the incidence of AIDS patients in Jordan in 2009 is 200 cases per 100,000, and after a strict educational program the incidence in 2010 dropped to 150 cases per 100,000. What do call this in the WOH definitions of epidemiological terms ?

<c+> Control

Q6. Which of the following microorganisms produces toxins by lysogenic conversion ?

<c+> C.diphtheria

Q7. All of the following infectious diseases are considered as biological war far, EXCEPT :

<c> Anthrax.

<c> Smallpox.

<c> Botulism.

<c> Plague.

<c+> N. gonorrhea.

Q8. The conversion of oncapsulated bacteria to capsulated one by the addition of died encapsulated one is a classical example of which of the following ?

<c+> Transformation.

Q9. ** All of the following can fit with the sketch of

Q10. Which of the following methods can be used to kill bacterial spores ?

<c+> Tyndalization.

Q11. Which of the following conditions H.pylori bacteria grows the best ?

<c+> In an alkaline medium.

Q12. Which of the following terms has the best match in relationship to the effect of osmotic pressure on bacteria ?

<c+> Hypertonic solution ... Plasmolysis

Q13. Student doing gram stain, following correct staining procedure, when he reviews the stain under bright field microscope, he is unable to see any of his bacteria. What is the most likely reason listed for what happened ?

<c+> The student forgot to heat fix the bacteria to the slide.

Q14. All of the following concerning the growth of bacteria are true, EXCEPT :

<c+> The generation time of bacteria is measured from the stationary phase.

Q15. All of the following can be used to culture intracellular microorganisms EXCEPT :

<c+> Enriched media.

Q15. Which of the following organisms can't be cultured on artificial media ?

<c+> T. pallidum

Q16. Sheep blood agar is used in the microbiology lab is part of :

<c+> Enriched media

Q17. Which of the following media can be used to differentiate between coagulase + and coagulase – bacteria :

<c+> Mannitol salt agar.

Q18. Which of the following media can differentiate between lactose fermenting and nonlactose fermenting bacteria ?

<c+> MacConkey agar

Q19. Facultative anaerobic microorganisms going to grow in which part of the thioglycollate tube ?

<c+> All of the tube will show growth.

Q20. In a viable bacterial count experiment if you take 0.1 ml of bacterial broth solution and dilute it to 1:1,000 times and grown it on a nutrient agar plate showed growth of average of 50 colonies. Then the total viable count in the original undiluted tube will be :

<c+> 50,000,000 CFU/ml

Q21. In the growth curve which of the following stages can be seen in an abscess ?

<c+> Stationary phase

Q22. All of the following are true of culturing fungi. EXCEPT :

<c+> The pH has to alkaline.

Q23. Which of the following antibiotics is used for the treatment of MRSA bacteria ?

<c+> Vancomycin

Q24. All of the following can be used to sterilize the objects.
EXCEPT :

<c+> Freeze drying.

<c> Autoclaving.

<c> Methylene oxide.

<c> Formaldehyde.

Q25. All of the following are true for an effective sterilization by autoclaving. EXCEPT :

<c+>

Q26. Which of the following antibiotics should never be given to out patient setting ?

<c+> Gentamycine.

Q27. All of the following are considered as superbugs. EXCEPT :

<c> MRSA

<c> VRE

<c> MRSA

Q28. Which of the following is true about pocket chart for hospitals antibiogram ?

<c+> To shape up the empirical therapy.
